Acture expands its capabilities: Automating Document Processing with Parashift
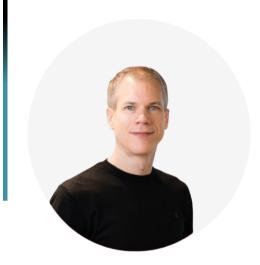

"Parashift helps us with fast and reliable processing of large amounts of data, allowing us to focus on more pleasant and higher value tasks"

Roy Hageman, Product Owner at Acture.

About Acture

Acture is a private provider of social security services in the Netherlands, specializing in activating employees and organizations. Founded in 2008, it initially focused on the Ziektewet (Sickness Act) within the flex industry but expanded its services across various sectors. Acture is known for its innovative approach to helping people return to work, offering tailored insurance solutions and managing workplace absenteeism. Their core mission is to promote employment as the best form of income security, leveraging technology and expert guidance.

Challenges

Acture needed a scalable solution to process a high volume of diverse documents (specifications). Managing this volume manually would be too time-consuming, fault-sensitive and delaying key decision-making and operational workflows. The desired solution needed flexibility and automation to handle the complex and enormous amount of data.

Implementation

The integration of Parashift into Acture's workflow was seamless. Acture configured the platform to extract relevant data from various document types, enabling automated processing. Parashift's out-of-the-box capabilities and great support were tailored to Acture's needs, ensuring rapid deployment and minimal disruption.

These figures highlight the benefits of Parashift compared to what Acture would have been achieved with a manual document processing.

300 hours
processing time saved

Solution

Parashift offered a sophisticated document processing platform, powered by AI, to automate data capture from diverse document types. The solution allowed Acture to digitize and streamline document processing, significantly reducing manual input. Acture leveraged Parashift's flexible API to optimize the accuracy of extracted data.

10x faster
processing

Results and future

Acture now has multiple solutions with high processing speed and operational efficiency. Manual document review and data entry is no longer an issue, allowing employees to focus on more pleasant and higher value tasks. This leads to quick decision-making and more reliable financial processing and reporting .

90%
productivity boost, freeing up employee time from manual tasks

Acture plans to extend its use of the Parashift Platform to handle an even wider variety of document types. This will further enhance their operational efficiency and help them scale document processing across various functions.

About Parashift

Parashift helps you automate your structured and unstructured document processing, easily and seamlessly. We integrate with your existing software to provide a value-added service to your business processes.

Ready-to-use document types make it easy to get started. Or, quickly create new document types with our user-friendly document type editor.

Stop wasting valuable resources on manual data entry. Let Parashift power your automated document processing, with fast and reliable results.
