

CheckHub helps customers save up to 85% on Document Validation time with Parashift

“Parashift's expertise in AI-powered document processing perfectly complements our mission to redefine document management excellence. This collaboration marks a pivotal moment in our commitment to delivering unparalleled value and efficiency to our clients. Together with Parashift, we are excited to innovate and set new standards in digital transformation and business automation.”

Peter Van Heeke, CEO of CheckHub

About CheckHub

CheckHub is a plug-and-play SaaS platform that automates document collection and validation during onboarding. It sends automated reminders, checks documents using OCR and layout analysis, exports data, and enables individuals to sign documents.

By integrating Parashift's AI advancements into CheckHub's established platform, the partnership aims to enhance document processing efficiency across diverse industries. This strategic alliance sets new benchmarks in automation and compliance, offering clients unparalleled benefits and operational enhancements.

Challenges

During the onboarding process of employees, temporary staff, clients... CheckHub customers need to collect a wide variety of documents from these parties. These collected documents need to be verified and validated to make sure they are valid and contain the correct data.

Experience & Solution

Integrating the Parashift IDP solution into the CheckHub SaaS platform allowed the customer to automate the verification and validation process for more than 1,500 document types. At the same time, they can automatically extract data from these documents to guarantee that the data in their systems is 100% correct at all times.

"CheckHub's platform support customers with the document collection during onboarding processes. In case of the onboarding process of personnel, we talk about the staffing companies or the HR department of any organization that has a large or complex document exchange when it is onboarding new people. In case of the onboarding of clients, we see companies from the financial, legal and services industry accomplishing the most added value."

Results

Using the CheckHub SaaS platform with the IDP solution from Parashift integrated allows the customers to save up to 85% of the time they used to spend on the admin tasks for document and data collection. This solution allows us to parse and verify all important documents automatically on the platform so the clients can be 35% more productive and reach up to 100% correct data.

Thanks to Parashift we can now automate the processing of more than 1,500 document types. But we are expanding this number as we go forward. Thanks to AI and Machine Learning technology we can train the system to learn to parse any new document type.
