VRG automates PDF processing and doubles document processing capacity with Parashift

"*VRG can offer its customers real added value with the Parashift solution: With PDF2EDI, we are expanding our offering with a service that did not previously exist in this form.*"

Marc Bittermann, Business Unit Manager EDI & Print, VRG GmbH

About VRG

VRG GmbH is a specialist in data management and printing services: from EDI (Electronic Data Interchange) to proprietary (industry-specific) portals such as ELGATE, as well as expertise in E-Invoicing, ZUGFeRD, XRechnung, and Peppol. Through document management, VRG supports customer communication with smart printing solutions, even for particularly sensitive data, all the way to optimized shipping. The company is also known for its digital processes, software, and services in payroll, human resources management, and travel management, as well as solutions for the social economy, EIM, IT, and cloud services. VRG offers better processes and tailored B2B solutions for businesses across all industries: VRG takes IT personally! Explore all VRG solutions and more services at www.vrg.de.

Challenges

Before using the Parashift Platform, the challenge in converting PDFs was that their structure could vary significantly, making it nearly impossible to extract information from PDF documents using conventional methods.

Experience & Solution

What we appreciate about Parashift is the user-friendly interface and the very quick onboarding of new documents.

VRG can now offer its customers a solution to convert orders, invoices, and other document types from a PDF format into an EDI format. This eliminates the need for customer employees to manually transfer order data into their ERP system.
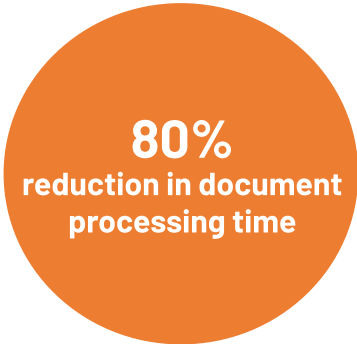

The implementation worked quite quickly: thanks to the documentation, we were able to set up a process promptly. This involves sending documents to Parashift and then further processing the extracted data.
